Amendments to the Specification:

Please replace the previous Abstract with the following replacement abstract, a clean version of which is provided on page 9.

The present invention provides Provided, among other things, is a light emitting device comprising: a light output; a light source that produces light having a producing light including wavelengths of 530 nm or less; and a wavelength transformer located between the light source and the light output, where the wavelength transformer comprises comprising  $Sr_{1-x}Ca_xGa_2S_4:yEu^{2+}\cdot zGa_2S_3$ , where x is 0.0001 to 1, y is a value defining sufficient Eu<sup>2+</sup> to provide luminescent emission, and z is 0.0001 to 0.2 based on the mole amount of Sr<sub>x</sub>Ca<sub>1-x</sub>Ga<sub>2</sub>S<sub>4</sub>, and where the wavelength transformer effectively to increases the light at the light output, the light having a wavelength between 535 nm and 560 nm.
